HEAT GUN AND SOLDERING IRON BATTERY-POWERED KIT FOR FIELD REPAIRS

A portable, battery-powered heat gun and soldering iron kit in installing heat shrinkable tubing and soldering applications in remote locations has been introduced by Malcom Hot Air Systems of Portsmouth, Rhode Island.

The Malcom MCH-100 Portable Battery Powered Heat Gun and Soldering Iron Kit features a 48 volt rechargeable battery pack housed in a rugged carrying case equipped with a 9 ft. Cable for connecting each tool. Providing a complete package for electronic field repairs, the hot air gun reaches 1,350°F for installing heat shrinkable tubing, boots, and solder sleeves: while the soldering iron can perform a variety of different repairs.

Eliminating the needs for power generators, propane and open flame, the Malcom MCH-100 Portable Battery Powered Heat Gun features interchangeable heating elements from 200 to 400 Watts, a built-in motor with a fan to provide 2.66 CFM air flow, and comes with four different nozzles for most applications. The 50 Watt soldering iron provides ample heat.
